Sequence 42872, Application US/09864761

Patent No. US2002004876341

GENERAL INFORMATION:
APPLICANT: Penn, Sharron G.
APPLICANT: Penn, David R.
APPLICANT: Chen, Wensheng
TITLE OF INVENTION: HUMAN GENOME-DERIVED SINGLE EXON NUCLEIC ACID PROBES USEFUL FO
TITLE OF INVENTION: GENE EXPRESSION ANALYSIS BY MICROARRAY
CURRENT APPLICATION NUMBER: US/09/864,761

CURRENT FILING DATE: 2001-05-23

PRIOR APPLICATION NUMBER: US 60/180,312

PRIOR APPLICATION NUMBER: US 60/180,312

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

or send an email to license@isb-sib.ch).
                                                                                                                                                                                                                                                                                                                                                                                                             (RNA)(N).
SUBINIT: CONSISTS OF A SIGMA FACTOR AND THE RNAP CORE ENZYME WHICH IS COMPOSED OF 2 ALPHA CHAINS, 1 BETA CHAIN, 1 BETA' CHAIN AND 1 OWEGA CHAIN (BY SIMILARITY).
DOMAIN: THE AMINO-TERMINAL PORTION IS INVOLVED IN THE ASSEMBLY OF CORE RNAP, WHEREAS THE C-TERMINAL IS INVOLVED IN INTERACTION WITH TRANSCRIPTIONAL REGULATORS (BY SIMILARITY).
SIMILARITY: BELONGS TO THE RNA POLYMERASE ALPHA CHAIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                            CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +

"Transport of L-lactate, D-lactate, and glycolate by the LidP and GlcA membrane carriers of Escherichia coli";
Biochem Biophys. Res. Commun. 290:824-829(2002).
FICHION: Transports glycolate across the membrane. Can also transport L-lactate and D-lactate. Seems to be driven by a proton
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           OF THE STAIN TO STAIN TO STRAIN TO S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      chlorophenylhydrazone (CCCP).

NCBI_TaxID=4932;
   step. This protein has a weak ATPase activity.
SIMILARIT: BELONGS TO THE DNA MISMATCH REPAIR MUTS FAMILY.
SAUTION: Ref.1 sequence differs from that shown due to frameshifts in positions 353, 379, 394, 422 and 425.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        01-FEB-1995 (Rel. 31, Created)

Scoring table:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
